

Fully synchronized with mobile and web in real-time

With Team on the Run's **Geolocation** service you can manage your teams on the field by getting real-time position tracking on the map. This Geolocation service allows your designated users ("Dispatch Managers") to locate other users on the map and also allows continuous real-time tracking on the map.

Track your drivers, send alerts, and get in-touch with drivers in a moments notice without having to use an external application. With Team on the Run you can get detailed statistics on your drivers and even export out reports to keep on file.
